

AI Usage & Governance Policy

Document ID: LEG-AI-001 | Effective: June 26, 2026 | Version: 1.0 | Classification: Internal

APPROVED — ACTIVE

1. Purpose & Scope

This policy governs the Legal Department's use of the TechCorp Enterprise AI Platform and any external AI tools. It defines acceptable use cases, risk boundaries, and compliance obligations for all legal professionals and support staff within the department.

This policy applies to all Legal Department personnel, including full-time attorneys, contract counsel, paralegals, legal operations staff, and any third-party consultants accessing TechCorp AI systems under Legal Department authorization.

2. AI Platform Integration

The Legal Department accesses the TechCorp Enterprise AI Platform through a dedicated tenant configured with role-based access controls managed jointly with the **IT Department** and audited quarterly by the **Security Department**. Core integrations include:

- **Contract Analysis Module** — AI-driven clause extraction, risk scoring, and deviation detection against TechCorp's standard templates, with every output logged to the audit trail.
- **Regulatory Watch Pipeline** — RAG-powered monitoring of regulatory changes across jurisdictions where TechCorp operates, with weekly digests routed to the relevant practice lead.
- **E-Discovery Assistant** — AI-assisted document review for litigation and internal investigations, with human-in-the-loop confirmation on all privilege determinations.
- **Legal Research Co-pilot** — Summarization and retrieval across internal precedent libraries and authorized external sources.

Connected Departments: IT (platform deployment & access) • Security (audit & data protection) • Finance (contract financial terms validation) • Sales (contract generation guardrails) • AI (model governance & safety standards)

3. Permitted AI Use Cases

Use Case	AI Role	Human Oversight Required
Contract clause extraction & summarization	First-pass analysis	Attorney review before any client-facing use
Regulatory change detection	Monitoring & alerting	Practice lead validates relevance
Legal research summarization	Synthesis of retrieved sources	Attorney verifies accuracy and completeness
Internal policy Q&A	Knowledge retrieval	Reviewed if used for binding guidance
E-discovery document categorization	Relevance scoring	Privilege calls made exclusively by counsel
Meeting note summarization	Transcription & summary	Reviewed for accuracy; not for privileged meetings

4. Prohibited AI Use

The following are strictly prohibited under this policy:

- **Fully automated legal advice.** AI output is advisory only. Final legal opinions, advice, and decisions must be rendered by a licensed attorney.
- **Uploading privileged or confidential attorney-client communications** to any public or consumer-grade AI tool (e.g., free-tier ChatGPT, public Claude, Gemini).
- **Auto-execution of contract terms.** AI must never auto-approve, auto-sign, or auto-commit contractual language without explicit attorney review.
- **Filing AI-generated content with courts or regulators** without full human verification of every factual claim and citation.
- **Training or fine-tuning external models** on TechCorp legal data without explicit written approval from the General Counsel and the AI Department.

5. Data Handling & Confidentiality

All Legal Department use of the AI Platform must comply with TechCorp's **AI Safety Guidelines** (AI Department) and the **Data Protection Standards** (Security Department). Specific requirements:

- Matter-level data isolation must be enforced — AI queries for one matter must not contaminate context for another.
- Privileged documents must be tagged with metadata that the AI Platform recognizes to restrict indexing and cross-matter retrieval.

- All AI interactions are logged and retained per the Legal Department’s document retention schedule, coordinated with IT.
- Third-party AI tools require a Data Protection Impact Assessment approved by Security before use.

6. Prompt Engineering & Quality Standards

Legal professionals using the AI Platform must adhere to TechCorp’s **Prompt Engineering Standards**. Legal-specific requirements include:

- Prompts must specify jurisdiction and governing law where relevant.
- Prompts requesting clause interpretation must include the full clause text and relevant contract context — never paraphrase.
- Outputs must be tested against known benchmarks quarterly; accuracy below 95% triggers a model review by the AI Department.
- Prompt templates for recurring legal tasks must be version-controlled and approved by the Legal Operations lead.

7. Roles & Responsibilities

Role	Responsibility
General Counsel	Overall policy ownership; final authority on AI use in legal matters; approves exceptions.
Legal Operations Lead	Day-to-day enforcement; prompt template governance; training coordination with AI Department.
All Attorneys	Human-in-the-loop compliance; verifying AI outputs before use; reporting anomalies.
Paralegals & Staff	Following approved prompt templates; escalating unexpected AI outputs to supervising attorney.
IT Department	Access provisioning and deprovisioning; platform uptime; integration maintenance.
Security Department	Quarterly access audits; data protection compliance; incident response for AI-related breaches.
AI Department	Model performance monitoring; safety review of legal-use models; prompt standard updates.

8. Incident Response

Any of the following constitutes an AI-related incident and must be reported within 2 hours to the General Counsel, Security Department, and AI Department:

- AI generating materially incorrect legal content that reaches a client, counterparty, or regulator.
- Suspected exposure of privileged or confidential information through AI tool usage.
- AI output exhibiting bias, hallucinated case law, or fabricated statutory references.
- Unauthorized access to the Legal Department's AI tenant or data.

Incident response follows the joint procedure maintained by Security and Legal Operations. A post-incident review involving the AI Department is mandatory within 5 business days.

9. Training & Compliance

- All Legal Department personnel must complete the TechCorp AI Safety training module within 30 days of hire and annually thereafter.
- Attorneys using the AI Platform must complete the Legal AI Prompt Engineering workshop before receiving platform access.
- Compliance audits are conducted quarterly by Legal Operations in coordination with the Security Department.
- Non-compliance with this policy is subject to the same disciplinary process as any other violation of TechCorp professional conduct standards.

10. Review & Revision

This policy is reviewed every 6 months by the General Counsel, Legal Operations Lead, AI Department representative, and Security Department representative. Revisions are versioned, approved by the General Counsel, and synchronized with updates to the TechCorp AI Safety Guidelines.
