

Campaign Performance & Optimization Policy

Document ID: MKT-CAMP-001 | Effective: June 27, 2026 | Version: 1.0 | Classification: Internal

APPROVED — ACTIVE

1. Purpose & Scope

This policy governs AI-assisted campaign planning, in-flight optimization, performance measurement, and reporting across all TechCorp marketing channels. It ensures that AI-driven optimization recommendations are transparent, attributable, and subject to human strategic oversight — AI suggests the next move; marketing professionals decide it.

This policy applies to all Marketing Department personnel involved in campaign strategy, execution, and measurement, including demand generation, digital marketing, marketing operations, and analytics teams. It also applies to external agencies managing TechCorp campaigns. It operates alongside the **AI Content Governance & Brand Policy (MKT-CONT-001)** and the **Forecasting & Budget Intelligence Policy (FIN-FP-001)** for marketing budget alignment.

2. AI Platform Integration

The Marketing Department uses the Enterprise AI Platform's campaign intelligence suite, with cross-channel data aggregated through integrations managed by the **IT Department** and performance data shared with **Sales** for pipeline attribution. Core integrations include:

- Campaign Optimization Engine** — AI continuously analyzes campaign performance across channels, generating optimization recommendations (budget reallocation, audience refinement, creative rotation, bid adjustments) with projected impact and confidence scores for marketing manager approval.
- Cross-Channel Attribution Model** — AI-driven multi-touch attribution assigning pipeline and revenue credit across marketing touchpoints, integrated with **Sales**'s CRM for opportunity attribution and **Finance**'s systems for marketing ROI calculation.
- A/B Test Automation Platform** — AI designs, executes, and analyzes A/B and multivariate tests, declaring statistical significance and recommending the

winning variant, with the campaign manager making the final promotion decision.

- **Campaign Performance Dashboard** — Real-time unified view of all active campaigns with AI-generated insights, anomaly detection (unusual CTR drops, spend spikes), and narrative performance summaries for stakeholder reporting.

Connected Departments: Sales (pipeline attribution & lead handoff metrics) • Finance (marketing budget & ROI reporting) • IT (martech stack & data pipeline integrity) • AI (optimization model accuracy & attribution methodology) • Customer Support (campaign-driven inquiry tracking)

3. Permitted AI-Assisted Campaign Activities

Activity	AI Role	Human Oversight Required
Campaign budget allocation recommendations	Performance-based reallocation modeling	Campaign manager reviews and approves all budget shifts
Audience targeting optimization	Segment performance analysis & refinement suggestion	Demand generation manager approves audience changes
A/B test design & analysis	Test design, execution & statistical analysis	Campaign manager selects winning variant; overrides AI if strategic context warrants
Cross-channel attribution	Multi-touch modeling & credit assignment	Marketing operations validates model; Sales provides pipeline ground truth
Anomaly detection & alerting	Real-time performance monitoring & flagging	Campaign manager investigates all flagged anomalies within 4 hours
Performance reporting & insights	Data aggregation & narrative drafting	Marketing analyst reviews and finalizes all stakeholder-facing reports

4. Prohibited Activities

The following are strictly prohibited under this policy:

- **AI auto-execution of budget changes above defined thresholds.** AI may recommend budget reallocation. Changes exceeding \$10,000 or 20% of campaign budget require explicit human approval. Auto-execution of small adjustments within guardrails requires documented pre-approval of the guardrail parameters.
- **AI auto-pausing or auto-terminating campaigns without human review.** AI may flag campaigns for pause consideration based on performance thresholds, but the decision to pause or terminate a live campaign must be made by the campaign manager.
- **Presenting AI-generated performance analyses as final without human review.** All performance reports, attribution analyses, and optimization recommendations shared with stakeholders outside Marketing must be reviewed and validated by a marketing professional.
- **Cherry-picking attribution models to present favorable results.** The approved cross-channel attribution model is the standard. Using alternative attribution models to present more favorable results without disclosing the methodology change is prohibited.
- **Running unapproved A/B tests on customer-facing experiences.** All A/B tests must be registered in the test automation platform with defined hypothesis, success metrics, and duration before launch. Tests affecting customer experience must include a rollback plan.

5. Campaign Data & Measurement Standards

All campaign activities must comply with TechCorp's **AI Safety Guidelines** (AI Department) and the **Marketing Data Governance & Personalization Policy (MKT-DATA-001)**. Measurement requirements include:

- Every campaign must have defined KPIs, target ranges, and measurement methodology registered in the campaign management platform before launch; AI optimization is scoped to these declared KPIs.
- The cross-channel attribution model is reviewed and recalibrated quarterly with input from Sales (for pipeline ground truth) and Finance (for revenue recognition alignment); model changes are versioned and documented.
- AI-generated performance insights must cite the data source, analysis methodology, and confidence level; uncited or unexplained insights are insufficient for decision-making and must be supplemented by analyst review.
- Campaign performance data is retained for a minimum of 3 years for trend analysis and model training; raw data retention follows the schedule maintained by Legal and IT.
- All budget-affecting AI recommendations are logged with the recommendation, AI confidence score, human decision, and decision rationale for audit and

model improvement.

6. Optimization Quality Standards

Marketing personnel must adhere to TechCorp's **Prompt Engineering Standards** when configuring AI campaign tools. Campaign-specific requirements include:

- Campaign optimization prompts must specify the campaign objective, target KPIs, budget constraints, and channel mix for the AI to generate contextually relevant recommendations.
- Attribution model prompts must be configured per campaign type and buying cycle length; a uniform attribution window across all campaigns distorts channel contribution analysis.
- A/B test design prompts must specify the variable being tested, control and variant descriptions, sample size requirements, and minimum detectable effect for valid test design.
- All campaign prompt templates must be version-controlled, approved by Marketing Operations, and stored in the department's shared prompt library.
- Optimization recommendation acceptance rate is tracked monthly; if more than 80% of AI recommendations are rejected, the optimization model is reviewed and recalibrated with the AI Department.

7. Roles & Responsibilities

Role	Responsibility
Chief Marketing Officer (CMO)	Overall campaign governance ownership; approval of campaign budgets above defined thresholds; quarterly campaign performance review with department leads.
Demand Generation Lead	Campaign strategy and execution oversight; AI optimization recommendation review and approval; budget allocation decisions; audience strategy governance.
Marketing Operations Lead	Campaign platform administration; attribution model governance; AI optimization guardrail configuration; prompt template management; campaign performance reporting process.
Campaign Managers	Day-to-day campaign optimization decisions; AI recommendation evaluation; A/B test approval and winner selection; anomaly investigation; performance report review.
Marketing Analysts	AI-generated insight validation; performance report finalization; attribution analysis review; trend identification and context addition to AI narratives.
Sales Department	Pipeline attribution ground truth; lead quality feedback loop; campaign-to-opportunity data accuracy; closed-loop reporting from opportunity to revenue.
Finance Department	Marketing budget governance; ROI calculation methodology alignment; campaign spend reconciliation; budget guardrail parameter co-approval with Marketing.
IT Department	Martech stack infrastructure; cross-channel data pipeline integrity; campaign platform access provisioning; A/B test platform technical operation.
AI Department	Optimization model accuracy; attribution model methodology review; campaign AI prompt standards; anomaly detection calibration.

8. Incident Response

Any of the following constitutes a campaign incident and must be reported within the timeframe specified:

- AI optimization executing unauthorized budget changes — report within 1 hour to Marketing Operations and Finance; change reversed immediately; budget guardrail reviewed; root cause identified within 24 hours.

- Campaign performance data corruption or loss — Marketing Operations and IT notified within 30 minutes; data restored from backup; affected campaigns flagged; performance reporting adjusted for the data gap.
- Attribution model producing systematically inaccurate results — Marketing Operations notified within 24 hours of detection; model taken offline for recalibration; interim attribution methodology applied; Sales and Finance informed.
- Unauthorized campaign targeting or audience data usage — report within 1 hour to Marketing Operations, Legal, and Security; campaign paused; targeting reviewed; data privacy implications assessed by Legal.
- A/B test affecting customer experience without approved rollback plan — Campaign Manager notified immediately; test halted if negative impact detected; customer impact assessed; post-incident review within 5 business days.

All campaign incidents are logged in the platform's incident management module. Incidents involving unauthorized budget changes or data privacy require CFO or Legal notification respectively. Post-incident review involving Marketing Operations, affected departments, and AI Department is mandatory within 10 business days.

9. Training & Compliance

- All campaign managers must complete the AI-Assisted Campaign Optimization certification within 60 days of onboarding and recertify annually.
- Marketing analysts must complete the AI Performance Analytics & Attribution training covering AI insight validation, report review standards, and attribution methodology.
- Marketing Operations personnel must complete the Campaign AI Platform Administration training covering guardrail configuration, prompt template management, and anomaly response procedures.
- Monthly campaign performance reviews include AI recommendation audit: acceptance rate, impact of accepted vs. rejected recommendations, and model calibration assessment.
- Non-compliance with this policy, including unauthorized budget changes or suppression of adverse performance data, is subject to progressive discipline administered by HR.

10. Review & Revision

This policy is reviewed every 6 months by the CMO, Demand Generation Lead, and Marketing Operations Lead, with input from the Sales Department (for pipeline attribution and lead quality feedback), Finance Department (for budget governance

and ROI methodology), IT Department (for martech and data pipeline infrastructure), and AI Department (for optimization model performance and attribution accuracy). Revisions are versioned, approved by the CMO, and synchronized with updates to the AI Content Governance & Brand Policy, the Marketing Data Governance & Personalization Policy, and the Forecasting & Budget Intelligence Policy. The review cycle is timed to complete before the annual planning cycle to ensure campaign methodology is current for the upcoming fiscal year budget process.
