

CRM Data Quality & Customer Records Policy

Document ID: SAL-DATA-001 | Effective: June 27, 2026 | Version: 1.0 | Classification: Internal

APPROVED — ACTIVE

1. Purpose & Scope

This policy establishes governance for customer data accuracy, AI-driven enrichment, data synchronization across enterprise systems, and the full lifecycle management of customer records within TechCorp's CRM. It ensures that every department relying on CRM data — Sales, Marketing, Customer Support, Finance, and Operations — works from a single, accurate, and maintained source of truth.

This policy applies to all Sales Department personnel who create, update, or use CRM records, as well as **Marketing**, **Customer Support**, **Finance**, and **Operations** personnel who contribute to or consume CRM data. It operates alongside the **Sales AI Governance Policy (SAL-AI-001)** and the **Enterprise Intellectual Property & Data Usage Policy (LEG-CORP-003)**.

2. AI Platform Integration

The Sales Department maintains CRM data quality through the Enterprise AI Platform's data governance suite, with enrichment from **Marketing**'s engagement platforms and synchronization managed by the **IT Department**. Core integrations include:

- **AI Data Enrichment Engine** — Automated enrichment of CRM records with firmographic, technographic, and contact data from approved third-party sources, with every enrichment change logged with source attribution and confidence score for Sales Operations review.
- **Duplicate Detection & Merge Module** — AI-driven identification of duplicate accounts, contacts, and opportunities using fuzzy matching across name, domain, email, and phone; proposed merges are queued for human approval with the surviving record highlighted.
- **Data Completeness Monitor** — Continuous AI scanning of CRM records against required-field definitions per record type and stage, generating completeness scores visible to account executives and aggregated for manager dashboards.

- **Cross-System Sync Auditor** — AI reconciliation of CRM records against **Finance**’s billing system, **Customer Support**’s ticketing platform, and **Marketing**’s engagement database to detect and flag synchronization discrepancies.

Connected Departments: Marketing (engagement data & lead source records) • Customer Support (account & contact verification) • Finance (billing & contract data synchronization) • IT (CRM infrastructure & integration maintenance) • Operations (order & delivery data alignment) • Legal (data retention & privacy compliance)

3. Permitted AI-Assisted CRM Activities

Activity	AI Role	Human Oversight Required
Record enrichment from approved sources	Automated data appending with source attribution	Account executive reviews enrichment changes; Sales Operations audits monthly
Duplicate detection & merge proposals	Fuzzy matching & survivorship recommendation	Data steward reviews and approves every merge before execution
Data completeness monitoring	Continuous field-level scanning & scoring	Sales manager reviews team completeness scores weekly
Cross-system synchronization auditing	Automated reconciliation & discrepancy flagging	Data steward investigates and resolves flagged discrepancies
Data decay detection	Staleness scoring based on last-activity and enrichment age	Account executive refreshes flagged records within 30 days
Record lifecycle stage progression	Stage recommendation based on activity signals	Account executive confirms or overrides stage changes

4. Prohibited Activities

The following are strictly prohibited under this policy:

- **Bulk data imports bypassing the enrichment and duplicate-check pipeline.** All CRM data imports must flow through the approved ingestion pipeline with AI duplicate checking and enrichment applied. Direct database imports are prohibited without Sales Operations and IT approval.

- **Deletion of CRM records outside the approved lifecycle process.** Records must not be hard-deleted except through the approved data retention workflow. Records flagged for deletion are soft-deleted and retained per the schedule maintained by **Legal** before permanent removal by IT.
- **Creation of duplicate records to bypass data quality enforcement.** Creating a new account or contact to avoid resolving a duplicate-detection flag is prohibited. All duplicate flags must be resolved through the merge workflow within 5 business days.
- **Enrichment from unapproved third-party data sources.** Only data sources registered in the enrichment source registry and vetted by Legal may be used for AI-driven CRM enrichment.
- **Modifying system-generated audit fields.** Creation date, last modified date, created by, and AI enrichment attribution fields are system-maintained and must not be manually altered.

5. Customer Record Lifecycle & Data Standards

All CRM data activities must comply with TechCorp's **AI Safety Guidelines** (AI Department) and the **Data Protection Standards** (Security Department). Lifecycle requirements include:

- Every customer record has a defined lifecycle: Prospect → Lead → Opportunity → Customer → Churned/Inactive. Stage progression requires defined criteria met and documented; AI recommends but does not auto-advance stages.
- Required fields are defined per record type and stage; the Data Completeness Monitor enforces minimum completeness thresholds before stage advancement is permitted.
- AI enrichment is applied continuously with every change source-attributed in the audit trail; account executives receive weekly enrichment summaries for their accounts and must acknowledge or revert changes within 14 days.
- Customer data retention follows the schedule maintained by Legal: active customer records retained indefinitely while relationship is active; inactive records retained for 7 years post-relationship; prospect records with no engagement beyond 24 months are archived.
- Data access follows the role-based access matrix: account teams see their assigned accounts; sales managers see their team's accounts; cross-team visibility requires documented business need and manager approval.

6. Data Quality Standards

Personnel managing CRM data must adhere to TechCorp's **Prompt Engineering Standards** when using AI data tools. CRM-specific requirements include:

- Enrichment configuration prompts must specify the approved data sources, fields to be enriched, and confidence threshold below which enrichment is queued for manual verification rather than auto-applied.
- Duplicate detection prompts must be tuned to the acceptable match tolerance per record type; overly aggressive matching creates excessive merge queues; overly loose matching misses true duplicates.
- Data completeness prompts must reference the current required-field matrix for each record type and stage; changes to the matrix require prompt template updates within 5 business days.
- All CRM data management prompt templates must be version-controlled, approved by Sales Operations, and stored in the department's shared prompt library.
- Data quality metrics (completeness, duplicate rate, enrichment acceptance rate, sync discrepancy rate) are reported monthly to Sales Operations and the CRO; persistent quality issues trigger a data quality improvement plan.

7. Roles & Responsibilities

Role	Responsibility
Chief Revenue Officer (CRO)	Overall CRM data quality ownership; approval of data governance framework changes; quarterly data quality review with department heads.
Sales Operations Lead	CRM data governance day-to-day; enrichment source registry maintenance; data quality metric monitoring; duplicate merge workflow oversight; prompt template governance.
CRM Data Steward	Duplicate merge review and approval; cross-system sync discrepancy resolution; data completeness enforcement; enrichment change audit; record lifecycle management.
Account Executives	Record accuracy for assigned accounts; timely resolution of data completeness flags; enrichment change review within 14-day window; duplicate flag resolution within 5 business days.
Marketing Department	Lead and contact data quality at point of creation; engagement data accuracy; campaign attribution data integrity; ICP data maintenance for enrichment targeting.
Customer Support	Account and contact verification during support interactions; ticket-to-account linking accuracy; customer health data contribution to account records.
Finance Department	Billing and contract data accuracy in source systems; synchronization validation with CRM; customer financial data classification.
IT Department	CRM infrastructure and performance; integration pipeline maintenance; enrichment engine operation; data backup and recovery; access provisioning.
Legal Department	Customer data retention schedule; third-party enrichment source compliance; data privacy regulation alignment; CRM data legal hold management.

8. Incident Response

Any of the following constitutes a CRM data incident and must be reported within the timeframe specified:

- Mass data corruption or erroneous bulk update affecting more than 100 records — report within 30 minutes to Sales Operations and IT; affected

records restored from backup; root cause identified within 24 hours.

- Customer data exposure through CRM access misconfiguration — report within 1 hour to Security, Sales Operations, and Legal; access corrected; exposed records identified; customer notification assessed by Legal.
- Enrichment engine applying systematically incorrect data from a source — Sales Operations notified within 2 hours; enrichment source suspended; affected records flagged for review; correction applied within 5 business days.
- Cross-system sync failure lasting more than 4 hours — IT and Sales Operations notified; manual sync validation initiated; affected departments informed; sync restored and verified.
- Unauthorized CRM record deletion or export — Security and Sales Operations notified within 1 hour; access audit conducted; records recovered if deleted; export scope assessed by Legal.

All CRM data incidents are logged in the platform's incident management module. Incidents involving customer data exposure require Legal assessment of notification obligations within 48 hours. Post-incident review involving Sales Operations, IT, and affected departments is mandatory within 10 business days.

9. Training & Compliance

- All Sales personnel must complete the CRM Data Quality & Governance training within 30 days of hire and annually thereafter.
- CRM Data Stewards must complete the AI-Assisted Data Management certification covering enrichment governance, duplicate resolution, and sync auditing.
- Marketing and Customer Support personnel who create or update CRM records must complete the CRM Data Entry Standards training covering required fields, duplicate prevention, and enrichment expectations.
- Monthly data quality dashboards are published by Sales Operations; departments with completeness below 90% or duplicate rates above 5% must submit a remediation plan within 30 days.
- Non-compliance with this policy, including unauthorized data imports or duplicate record creation, is subject to progressive discipline administered by HR.

10. Review & Revision

This policy is reviewed every 6 months by the CRO, Sales Operations Lead, and CRM Data Steward, with input from the Marketing Department (for lead data quality and enrichment needs), Customer Support Department (for account data alignment), Finance Department (for billing and contract data synchronization), IT Department

(for CRM infrastructure and integration), Legal Department (for data retention and privacy compliance), and AI Department (for enrichment and duplicate detection model performance). Revisions are versioned, approved by the CRO, and synchronized with updates to the Sales AI Governance Policy, the Enterprise Intellectual Property & Data Usage Policy, and the Data Protection Standards.
