

Lead Intelligence & Qualification Policy

Document ID: SAL-LIQ-001 | Effective: June 27, 2026 | Version: 1.0 | Classification: Internal

APPROVED — ACTIVE

1. Purpose & Scope

This policy governs AI-assisted lead scoring, customer prioritization, and qualification standards across all TechCorp sales operations. It defines how the Enterprise AI Platform enriches and scores leads using data from multiple departments while ensuring that AI-driven prioritization remains a recommendation — final qualification, territory assignment, and engagement decisions rest with sales leadership.

This policy applies to all Sales Department personnel, including sales development representatives (SDRs), account executives, and sales operations. It also applies to the **Marketing Department** for lead generation and scoring input, and to **IT** for lead routing and CRM configuration.

2. AI Platform Integration

The Sales Department uses the Enterprise AI Platform's lead intelligence module, with data enrichment sourced from **Marketing's** campaign platforms and **Customer Support's** interaction history. Core integrations include:

- **Lead Scoring Engine** — AI-driven scoring model that evaluates every lead against fit (firmographics, technographics), intent (behavioral signals from Marketing's digital properties), engagement (email opens, content downloads, event attendance), and existing relationship data from **Customer Support** for current customers.
- **Intent Signal Aggregator** — AI monitors and aggregates third-party intent data, website behavior, and content consumption patterns, surfacing accounts showing active buying signals for SDR prioritization.
- **Territory & Routing Optimizer** — AI-assisted lead-to-rep matching based on expertise, capacity, geography, and historical win rates, with routing recommendations reviewed weekly by sales managers.
- **Account Qualification Co-pilot** — AI pre-populates qualification frameworks (BANT, MEDDIC) with data extracted from CRM, public sources, and internal interactions, presenting a qualification starting point for the account executive to validate and complete.

Connected Departments: Marketing (lead generation & intent signals) • Customer Support (account health & interaction history) • IT (CRM configuration & lead routing) • Finance (lead-to-revenue attribution & CAC analysis) • AI (scoring model accuracy & bias monitoring)

3. Permitted AI-Assisted Lead Activities

Activity	AI Role	Human Oversight Required
Lead scoring & prioritization	Multi-signal scoring & ranking	SDR manager reviews score distribution weekly; adjusts thresholds as needed
Intent signal aggregation	Cross-source signal collection & surfacing	SDR validates intent signals before outreach; dismisses irrelevant signals
Lead-to-rep routing	Optimization-based assignment recommendation	Sales manager approves routing assignments; overrides for strategic accounts
Qualification framework pre-population	Data extraction & framework mapping	Account executive completes and validates every qualification field
Account enrichment	Firmographic & technographic data appending	SDR verifies key enrichment data points before using in outreach
Lead decay & re-engagement triggering	Engagement monitoring & decay detection	SDR manager reviews re-engagement triggers weekly; approves campaign enrollment

4. Prohibited Activities

The following are strictly prohibited under this policy:

- **AI auto-disqualification of leads without human review.** AI may recommend disqualification with supporting evidence, but only a qualified SDR or account executive may disqualify a lead. Leads flagged for AI disqualification must be manually reviewed within 48 hours.
- **AI-driven outreach without human approval.** AI may draft outreach messages, but no communication may be sent to a lead without human review and approval. Automated sequences must have every template approved by Sales Operations before activation.

- **Lead scoring based on protected characteristics or prohibited data sources.** Scoring models must not use data correlated with race, gender, age, religion, or other protected characteristics. AI bias audits are conducted quarterly by the **AI Department** and Sales Operations.
- **Suppression or manipulation of lead scores to influence territory assignment.** Lead scores are system-generated and auditable. Manual score overrides require sales manager approval with documented justification and are reviewed monthly.
- **Ingesting third-party lead data without verified compliance.** All third-party lead sources must be vetted by **Legal** for data privacy compliance before integration with the Lead Scoring Engine.

5. Lead Data & Scoring Governance

All lead intelligence activities must comply with TechCorp's **AI Safety Guidelines** (AI Department) and the **Data Protection Standards** (Security Department). Specific requirements:

- The lead scoring model is documented and transparent: every scoring factor, weight, and data source is published in the Sales Operations knowledge base and reviewed quarterly for relevance and bias.
- Lead data enrichment sources are registered in the data provenance tracker; enrichment from unregistered or unverified sources is prohibited.
- Lead scores must be recalculated at least weekly to reflect freshest engagement data; scores older than 14 days are flagged as stale and must be refreshed before being used for prioritization.
- Territory and routing rules are maintained by Sales Operations with quarterly validation by sales managers; AI routing recommendations that conflict with defined rules are flagged for manual resolution.
- All lead scoring data, model versions, and score changes are logged with full audit trail; retention follows the CRM data retention schedule maintained by IT and Legal.

6. Lead Intelligence Quality Standards

Sales and marketing personnel must adhere to TechCorp's **Prompt Engineering Standards** when configuring AI lead tools. Lead-specific requirements include:

- Lead scoring configuration prompts must include the target customer profile, ideal customer profile (ICP) definition from Marketing, and exclusion criteria to calibrate the model accurately.
- Qualification pre-population prompts must reference the specific qualification framework (BANT/MEDDIC) and the lead's known data points to avoid

hallucinated qualification information.

- Intent signal prompts must specify the signal sources, recency window, and signal strength threshold to filter noise from actionable intelligence.
- All lead management prompt templates must be version-controlled and approved by Sales Operations before deployment in the Lead Scoring Engine.
- Lead scoring model accuracy is measured by conversion rate correlation quarterly; models with declining predictive accuracy trigger a recalibration review with the AI Department within 30 days.

7. Roles & Responsibilities

Role	Responsibility
Chief Revenue Officer (CRO)	Overall lead intelligence ownership; approval of scoring model changes; escalation point for lead routing disputes; quarterly lead quality review with Marketing.
Sales Operations Lead	Lead scoring model governance; territory and routing rule maintenance; prompt template approval; lead management tooling administration; bias audit coordination.
SDR Manager	Daily lead queue management; score threshold tuning; SDR productivity monitoring; lead disqualification review; re-engagement campaign approval.
SDRs	Lead review and qualification per scored queue; intent signal validation; enrichment data verification; timely lead follow-up within defined SLAs.
Marketing Department	ICP definition and maintenance; lead generation campaign execution; intent signal source management; lead scoring model input on fit and behavior factors.
Customer Support	Customer interaction data for account-based scoring; account health indicators for existing-customer lead qualification; support-ticket-driven intent signals.
IT Department	CRM and lead routing infrastructure; lead data pipeline integrity; scoring engine integration; access provisioning for lead management tools.
Legal Department	Third-party lead data source compliance; lead data privacy review; lead outreach consent compliance; bias audit legal oversight.
AI Department	Scoring model accuracy and bias monitoring; intent signal aggregation quality; lead AI prompt standard governance; model recalibration support.

8. Incident Response

Any of the following constitutes a lead intelligence incident and must be reported within the timeframe specified:

- Lead scoring model producing systematically biased scores — Sales Operations notified within 24 hours of quarterly audit detection; model taken offline for recalibration; affected lead assignments reviewed.

- Unauthorized lead data export or exposure — report within 1 hour to Security, Sales Operations, and Legal; data access revoked; affected leads and regulatory implications assessed by Legal.
- Lead routing failure resulting in leads unassigned for more than 24 hours — SDR Manager and IT notified; routing rules restored; missed leads manually assigned and contacted within 48 hours.
- Third-party lead data source found to be non-compliant — Sales Operations and Legal notified within 24 hours; source integration suspended; leads from that source quarantined pending compliance review.
- AI-generated outreach sent without human approval — Sales Operations notified within 2 hours; affected communications reviewed for accuracy and appropriateness; corrective communication sent if needed.

All lead intelligence incidents are logged in the platform's incident management module. Incidents involving data privacy require Legal assessment within 48 hours. Post-incident review involving Sales Operations, IT, and affected departments is mandatory within 10 business days.

9. Training & Compliance

- All SDRs must complete the AI-Assisted Lead Qualification workshop before receiving Lead Scoring Engine access and refresh annually.
- Sales managers must complete the Lead Scoring Governance & Bias Awareness training covering model oversight, threshold management, and fair qualification practices.
- Marketing personnel contributing to lead scoring must complete the Lead Data Quality & ICP Definition training covering how their inputs affect scoring outcomes.
- Quarterly lead quality audits are conducted by Sales Operations with Marketing; findings reviewed by the CRO and VP of Marketing; scoring model adjustments tracked and documented.
- Non-compliance with this policy, including unauthorized score manipulation or use of prohibited scoring factors, is subject to progressive discipline administered by HR.

10. Review & Revision

This policy is reviewed every 6 months by the CRO, Sales Operations Lead, and SDR Manager, with input from the Marketing Department (for ICP, intent signals, and lead generation practices), Customer Support Department (for account health and interaction data), IT Department (for CRM and routing infrastructure), Legal Department (for data privacy and bias compliance), and AI Department (for scoring

model performance and bias monitoring). Revisions are versioned, approved by the CRO, and synchronized with updates to the Sales AI Governance Policy, the CRM Data Quality & Customer Records Policy, and the TechCorp AI Safety Guidelines.
